Only two wires for great performances  
The easy system that reduces time and costs

**Duo System** is the new Aci Farfisa philosophy of digital system, for a practical and fast videointercom installation, that allows to cut strongly time and costs. A new technology that simplifies the videointercom systems of medium size, today with **Duo System** only two non-polarised wires are enough to make easily even complex installations. Video and audio signals, opening door lock service and controls of various functions stay only on two non-polarised wires, simplifying the system and improving the quality. The wiring is easier, the time of carrying out is shorter, for a great decreasing in installation costs.

practical  
easy  
low cost

## DOOR STATIONS

### Matrix Digital composition

### Matrix Conventional composition

### Matrix

Modular anti vandal technology

**Duo System** technology exploits the elegant and innovative aesthetics of Matrix range with modules for conventional or digital push button panels. **Duo System** allows the installation of max. 4 external stations in parallel and 40 internal stations. Solid and anti vandal (IP45 and IK09) the modular Matrix push button panel is composed by buttons and plates in stainless steel, especially conceived to be resistant to breaking, water spout and solid penetration. The back light with green LED's allows a simple identification especially in poorly illuminated situations. Moreover the modularity allows the realisation of videointercom systems for great number of users, with possibility of vertical or horizontal mounting configuration. All the compositions are completed by aluminium die-cast frame and back boxes for wall fixing.

## INTERNAL STATIONS

### Compact videointercom

### Project videointercom

### Compact

Sounds good, looks good, striking design

### Project

Easy, practical, advanced

**Duo System** uses the internal videointercom stations of Compact and Project ranges. Both perfectly are integrated, with style and advanced performances, in every type of environment. They meet every requirement with the classical function of opening door lock with the proper button. They are provided with auto turn-on button by which it is possible to switch on the camera of the door station of the last call. Compact and Project monitors respectively have one and five additional buttons where it is possible to program the direct turn on of cameras or intercommunicating service with other monitors or intercoms. Call from landing is available. The choice between one or another line depends on aesthetic and functional requirements.
